

In the corner I am going to have the logo that will bring you to the home page

Navigation will be on the right side

Logo/ name will be on the middle of the page. I want to keep a simple looking page

ex. hamburger menu
• buttons down the side

style
page size =

opens to all the names

opens to three buttons

Company name at bottom with nothin else to take away from it

Ideas

- Something ^{part of the product} on the main page as well
- maybe something moving around.
- make the name pop somehow
